SUMMARY

Backend developer with a growing focus on AI systems, currently finishing an M.Sc. in Computer Applications and Information Technology at Gujarat University. I build with FastAPI, LangChain, and LangGraph, and most of my recent work has been on RAG pipelines and multi feature AI platforms rather than single purpose apps. Zentriom, a platform I built that bundles five AI tools into one product, is the clearest example of that. Looking for backend or full stack roles where I can keep working close to LLMs in production.

SKILLS

Languages

- Python
- JavaScript
- Golang

Frontend

- SvelteKit
- Tailwind CSS
- Shadcn

Tools

- Git
- OpenCV
- HuggingFace

Backend

- FastAPI
- Flask
- LangChain
- LangGraph
- REST APIs

Databases

- MySQL
- MongoDB
- PostgreSQL (Neon)

Cloud

- AWS
- IBM Cloud (Watsonx, Watsonx Orchestrate)

PROFESSIONAL EXPERIENCE

IBM SkillsBuild AI & Cloud Intern

06/2026 – 07/2026

Edunet Foundation X IBM

Worked hands on with IBM's AI and cloud stack, including Watsonx.ai, Watsonx Orchestrate, and IBM Cloud's broader services, rather than just reading documentation about them. The internship overlapped with the backend build on Zentriom, so a lot of what I picked up here fed straight into that project instead of sitting unused.

PROJECTS

Zentriom — AI Productivity Platform 🔗

07/2026 – Present

- Built a platform combining five AI tools (grammar correction, chat, LinkedIn post generation, resume review, code explanation) into one product, with FastAPI and LangGraph handling the backend logic.
- Implemented Google OAuth and JWT based session handling for login and per user access, backed by Neon PostgreSQL and connected to IBM Watsonx's Granite model.
- Added per feature chat history with a filter to view history by tool, currently building session based chat storage and a job search module.

Medical Chatbot (RAG-Based) 🔗

03/2026 – 04/2026

- Built a RAG chatbot that answers medical questions from uploaded PDFs instead of relying on the model's built in knowledge.
- Used HuggingFace embeddings to retrieve relevant chunks before passing them to the LLM, keeping responses grounded in the source document.
- Reduced hallucinated answers by tying every response back to retrieved context rather than open ended generation.

AI Voice Assistant

08/2025 – 12/2025

- Built a voice assistant that takes audio input and returns structured responses through a FastAPI backend connected to a SvelteKit frontend.
- Ran intent recognition using a transformer model to interpret spoken commands and route them correctly.
- Focused on cutting response latency so the interaction felt real time rather than delayed.

BuildTrack — Construction Management System

09/2024 – 03/2025

- Built a full stack construction management app on Flask and MySQL for project tracking and attendance.
- Used OpenCV based face recognition to log attendance automatically, removing manual check ins.
- Added CRUD operations for site data and a reporting dashboard for operations summaries.

EcommerceTrack

04/2026 – 05/2026

- Built a REST API backend for e commerce analytics, covering top spenders, revenue by category, and order volume by city.
- Wrote a Faker seed script to populate the database with realistic order data for testing the analytics endpoints.
- Structured endpoints to return aggregated, ready to use data rather than raw records needing further processing.

EDUCATION

M.Sc. Computer Applications & Information Technology

K.S. School of Business Management and Information Technology

07/2025 – Present
Ahmedabad, India

B.Sc. Computer Applications & Information Technology

K.S. School of Business Management and Information Technology

07/2022 – 04/2025
Ahmedabad, India

CERTIFICATES

AI Professional Certificate

Applied AI across research, content creation, and data analysis, including building a working AI app.

AI Fluency: Framework and Foundations

Learned a structured framework for delegating tasks to AI and critically evaluating what it produces.

AWS Fundamentals

Covered core AWS services, security, workload migration, and serverless applications across a three course specialization.
