SUMMARY

I am currently pursuing my M.Sc. in Computer Applications and Information Technology at Gujarat University. I have been building projects mainly with Python, FastAPI, Flask, SQL, and REST APIs, and I have worked on backend features such as authentication, database design, and API development. I have also worked with LangChain and RAG while building AI-based applications. I am looking for an opportunity where I can work on real software projects, improve my backend development skills, and gain experience as a developer.

SKILLS

Languages

Python, JavaScript

Databases

MySQL, MongoDB

Cloud

AWS, IBM Cloud (Watsonx, Watsonx Orchestrate)

Backend

FastAPI, Flask, LangChain, REST APIs

Tools

Git

Core Python

OOP, exception handling, data structures (lists, tuples, sets, dictionaries), file handling

PROFESSIONAL EXPERIENCE

IBM SkillsBuild AI and Cloud Intern

06/2026 – 07/2026

Edunet Foundation X IBM

- I worked with IBM Watsonx.ai, Watsonx Orchestrate, and IBM Cloud as part of the IBM SkillsBuild internship.
- I learned how to use IBM cloud and AI services and applied them while working on my Zentriom backend project.

[View Certificate](#)

PROJECTS

VideoRedact: Automated Video Redaction

- I built a Flask app that detects people and vehicles in uploaded video using YOLO and blurs them frame by frame with OpenCV, then converts the output to browser friendly MP4 with FFmpeg.
- I used Amazon S3 for temporary storage of the original and processed video.

GitHub: <https://github.com/rathod-pritesh/video-redaction-tool>

Zentriom: AI Productivity Platform

- I built the backend for a platform that combines five tools (grammar correction, chat, LinkedIn post generation, resume review, code explanation) into one product, using FastAPI for the API layer and PostgreSQL (Neon) for storage.
- I implemented Google OAuth and JWT based session handling so each user gets isolated access to their own data.

GitHub: <https://github.com/rathod-pritesh/zentriom-ai>

Medical Chatbot: RAG Based Question Answering

- I built the backend for a chatbot that answers medical questions from uploaded PDFs instead of relying only on the model's built in knowledge.
- I used HuggingFace embeddings to retrieve relevant chunks before passing them to the LLM, so the retrieval logic sits entirely in code I control rather than in the model itself.

GitHub: <https://github.com/rathod-pritesh/end-to-end-medical-chatbot-generative-ai>

BuildTrack: Construction Management System

- I designed the database schema across Users, Attendance, Projects and Admin tables, with foreign key relationships connecting attendance and project access back to individual users.
- I used OpenCV-based face recognition to log attendance automatically, removing manual check-ins.

CERTIFICATES

Google AI Professional Certificate

I completed a 7 course series covering AI fundamentals, data analysis, and practical ways to apply AI to real work.

AWS Fundamentals

I gained an understanding of core cloud computing concepts and AWS services, including when to use each one.
